FMA

Wide Format UV Coater

When it comes to enhancing a print job or protecting the quality of your print surface, ultraviolet coating is the finishing method of choice. FMA's Wide Format UV Coater is able to fulfill the coating needs of companies with larger print requirements, ranging from 32 inches to 84 inches. Custom manufactured coaters are available for print jobs larger than 84 inches.

- EDPM applicator roller allows for flawless transfer of UV coating. This low-wear rubber applies coating evenly without producing surface texture.
- Thin Substrate Removal kit prevents wrap-up of prints, resulting in a more reliable production line.
